

# Project Title

## A CRM Application to Handle Clients and Their Property-Related Requirements

### 1. Project Overview

This project focuses on creating a **CRM solution in Salesforce** to streamline handling client property-related requirements. Designed to address the challenge of **efficiently managing client and property records**, the project aims to **enhance user experience and data accuracy** by automating data entry and approval processes. Through Salesforce's capabilities, this CRM solution will support real estate client management, providing a comprehensive approach to client interaction and property management.

### 2. Objectives

- **Business Goals:** To streamline the process of managing client records and property details, reducing manual work and minimizing errors.
- **Specific Outcomes:**
  - Automated record creation for client data through Jotform integration.
  - Structured property details app for clear data organization.
  - Automated approval process for property entries, ensuring data consistency.
  - Enhanced user role and profile management for security and access control.

### 3. Salesforce Key Features and Concepts Utilized

- **Jotform Integration:** Automatically creates customer records in Salesforce.
- **Custom Objects:** Property details and client information managed within custom Salesforce objects.
- **Approval Process:** Automated process for approving property records.
- **Record Trigger Flow:** Automates the submission of property records into the approval workflow.
- **Lightning Web Component (LWC):** Custom component for property details, embedded in the App Page.
- **Apex Classes:** Programmatic control over business logic, secured through profile access.

### 4. Detailed Steps to Solution Design

- **Data Model:**
  - Custom objects: Client and Property with fields for contact information, property details, and approval status.

- **User Interface:**
  - Created App Page for property management.
  - LWC to display and manage property details, accessible on the App Page.
  - Integrated Jotform on the client website to feed data directly into Salesforce.
- **Business Logic:**
  - Apex triggers for automation and error-checking.
  - Record trigger flow to initiate the property approval process automatically.

## FLOW

## LWC COMPONENT

## 6. Key Scenarios Addressed by Salesforce in the Implementation Project

- Automated client record creation from Jotform submission, eliminating manual data entry.
- Property approval process automation to ensure only verified property records are accessible.
- Property details viewing and management in a custom LWC within the Salesforce App Page, enhancing client interaction.

## 7. Conclusion

**Summary of Achievements:** This project successfully implemented a CRM solution for client and property management. Key achievements include automated data entry, streamlined property record approval, secure access management, and a user-friendly interface for property interaction.
